

ambient works

The air quality tracker for
the creative industries

Polluted air leads to 7 million premature deaths globally each year

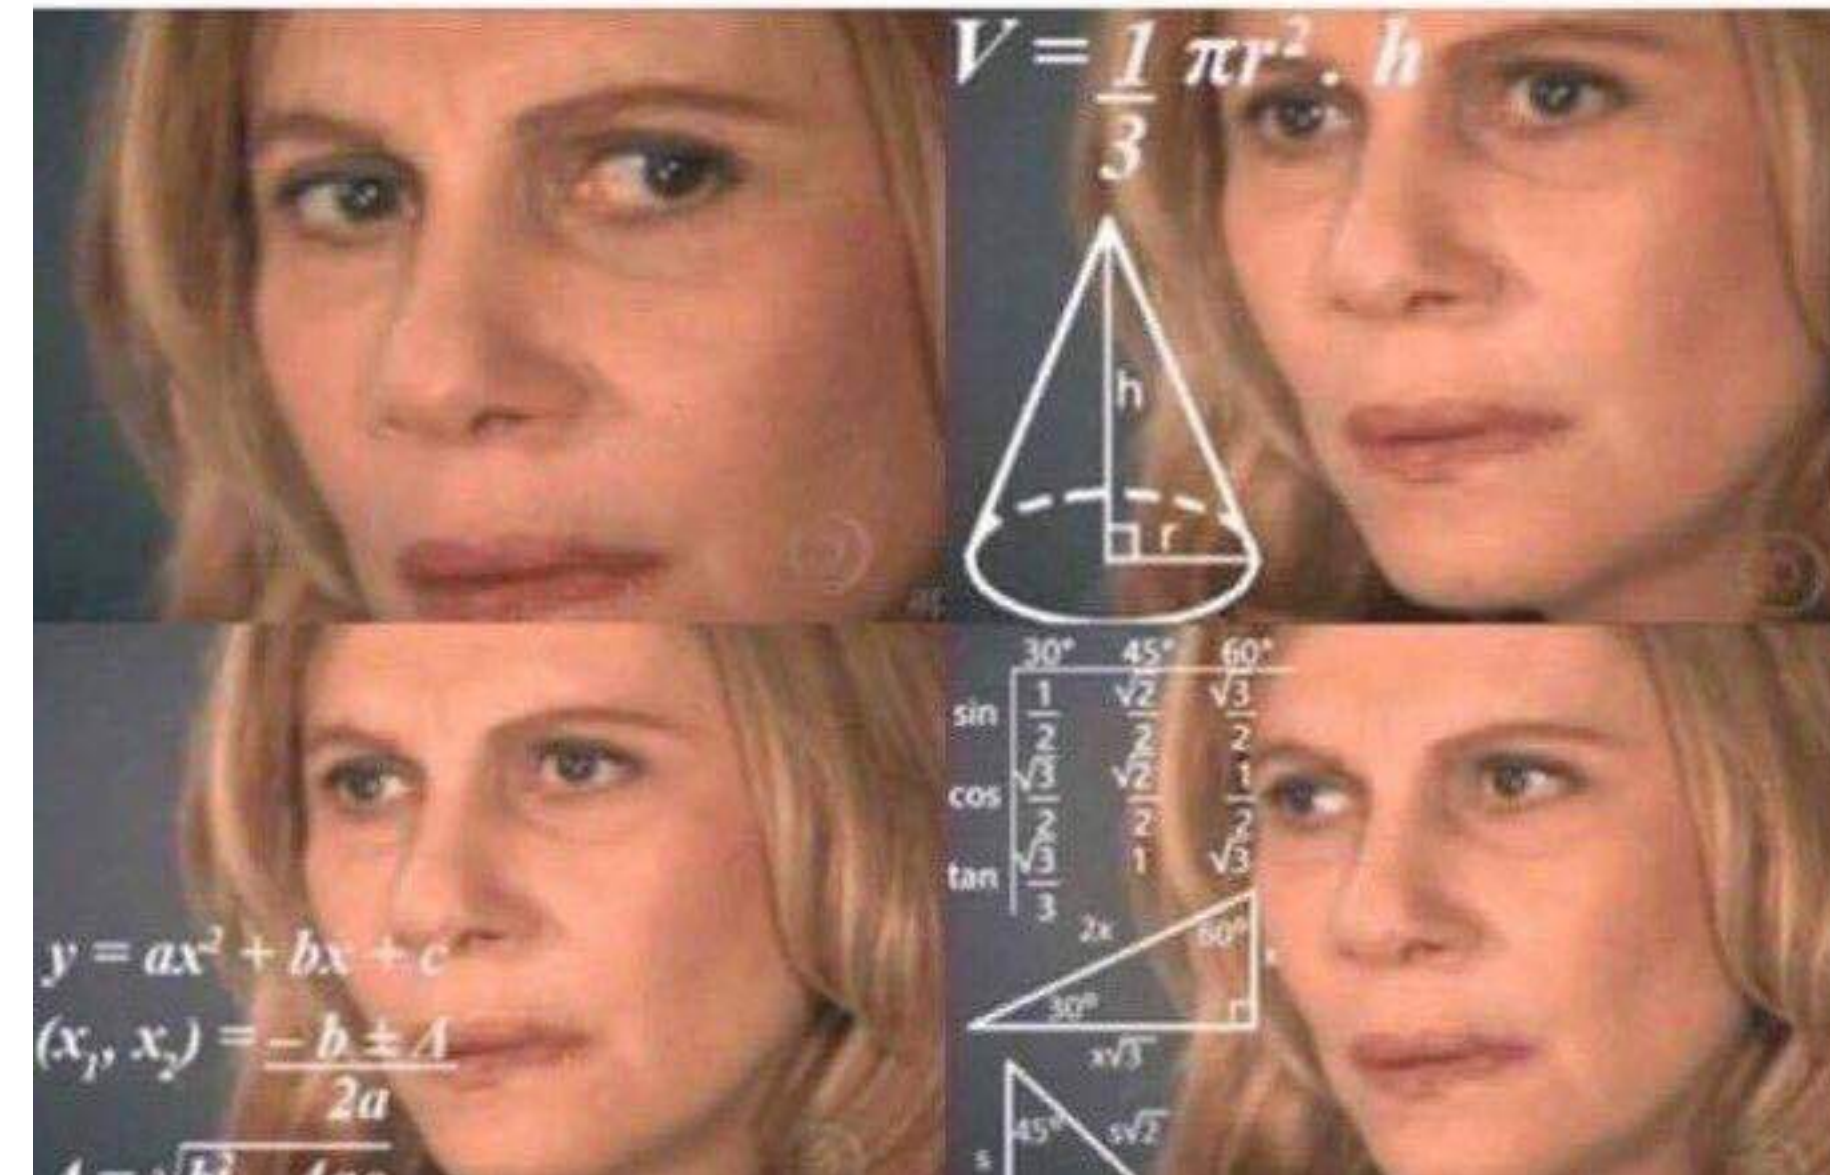

Indoor air can be up to 5x more polluted than outdoors¹

In 2016, 450,000 deaths were attributable to workplace exposure to air pollution²

Current solutions on the market are difficult to use and need expertise

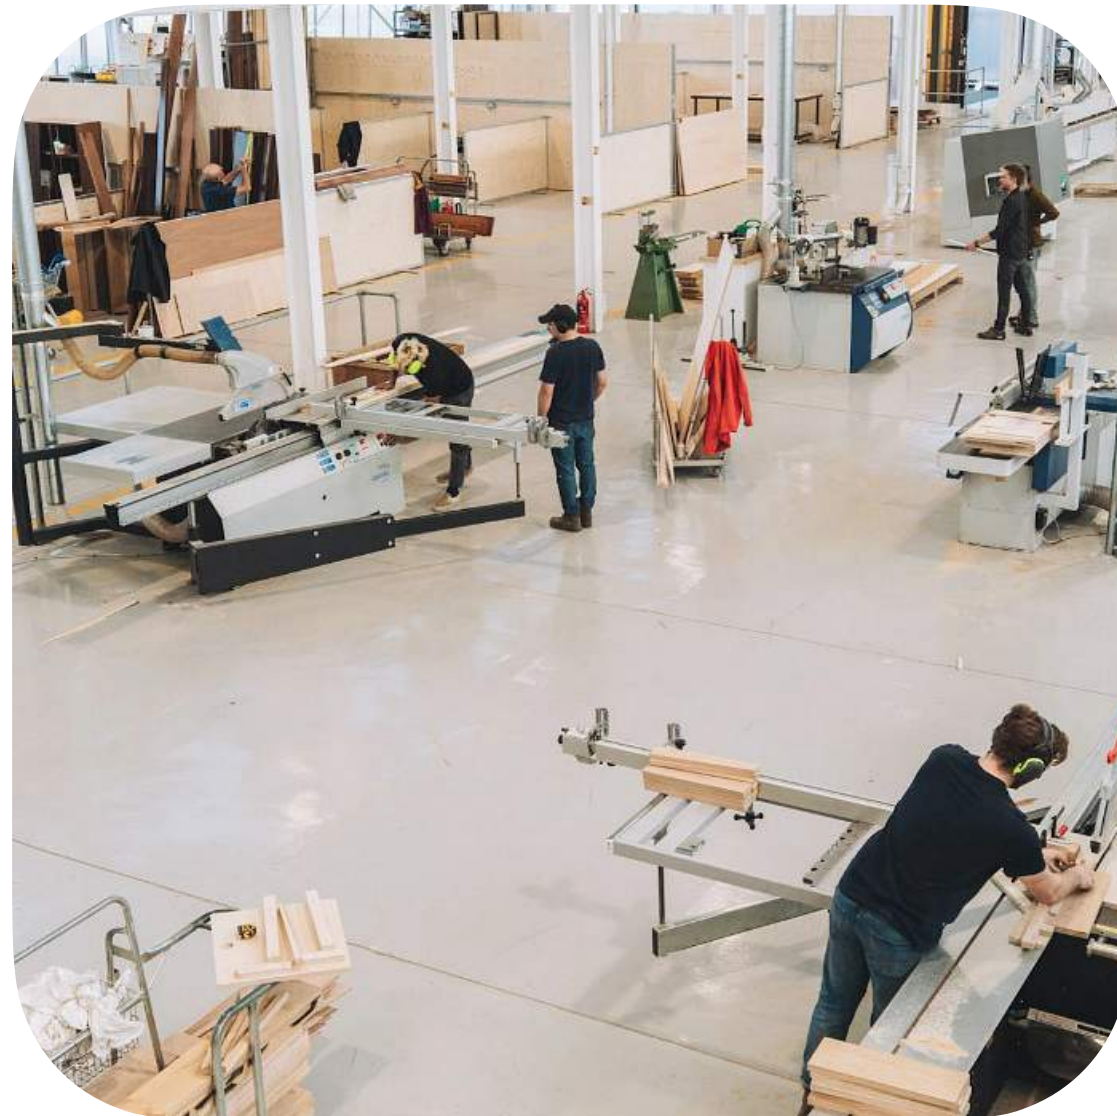

CO mg/m³ ppm
AQI PM2.5
CO² ppb µg/m³ PM10
HEPA MERV LEV
HCHO

Creative industries are hit the hardest, so that's where we are starting

Urban Manufacturing

Hazardous levels of particulate matter are caused by working with wood and metals.

Makers and Artisans

Silica in ceramics can cause silicosis.

Creatives and Practitioners

Carbon Dioxide can lead to reduced productivity

Ambient 1

The air quality tracker for the creative industries.

Optimised for creative spaces

User friendly and robust architecture designed to fit in busy environments.

Tailored air sensors

No more overpaying for unnecessary features - you get exactly what you need.

Long lasting battery

Bring it with you to follow the action.

Ambient 1

The air quality tracker for the creative industries.

Activity aware alerts

Hard wood or clay dust are carcinogens, let us alert you when pollution levels rise during specific activities.

Share your data safely

Allow everyone in your space to share data and insights.

Save time and resources

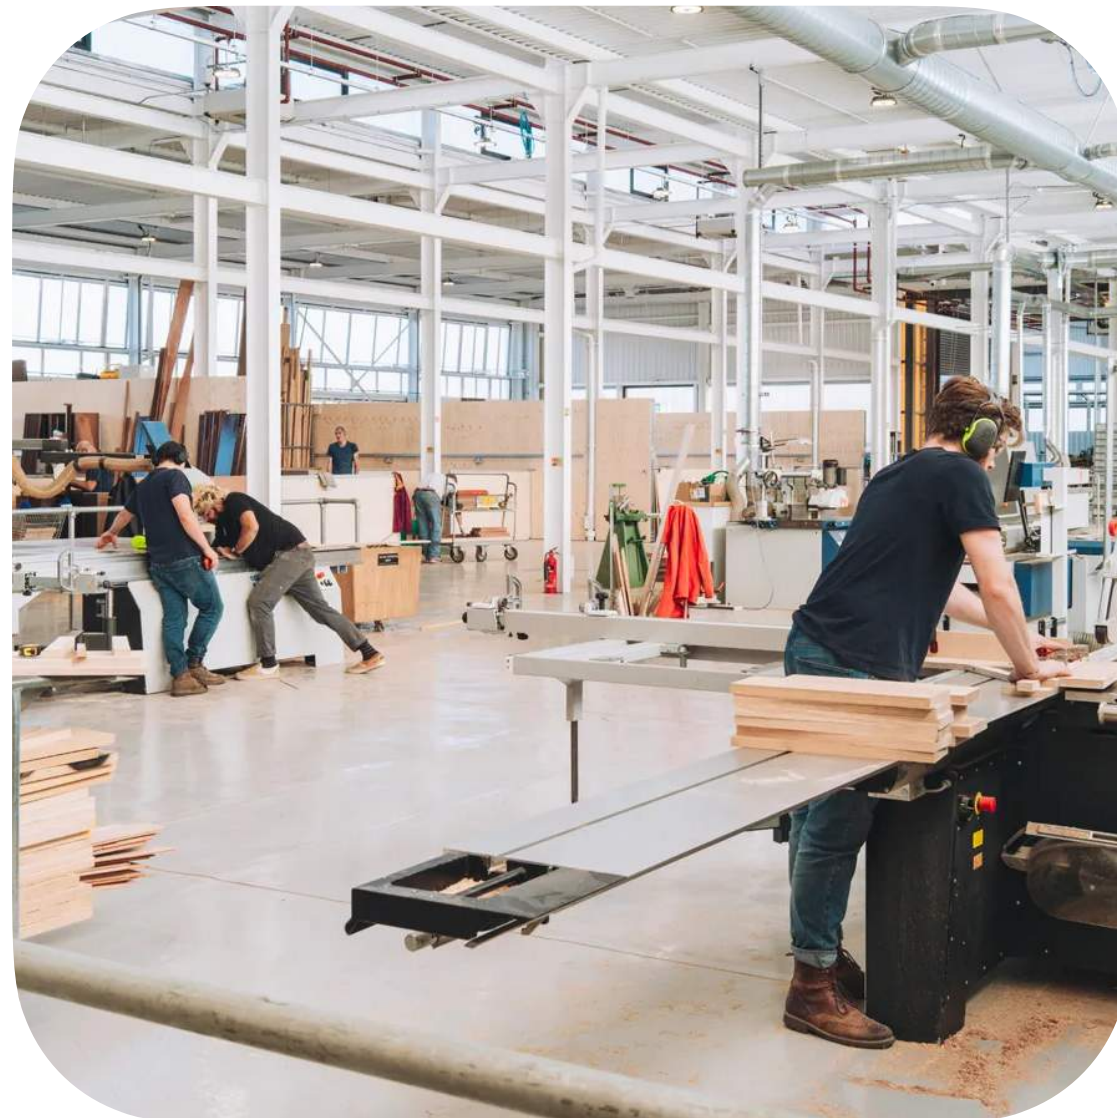

Quick overview of all the stats you need without exporting. Compare to relevant health and safety advice.

We are currently piloting with key London businesses.

hello@ambientworks.io

Market is confusing
Numerous sensors and pollutants
Which one is suitable
Fragmented
Combination of different pollutants not
provided by one provider.
Health impact
Health impact of pollutants in specific
environments are not simple to understand.

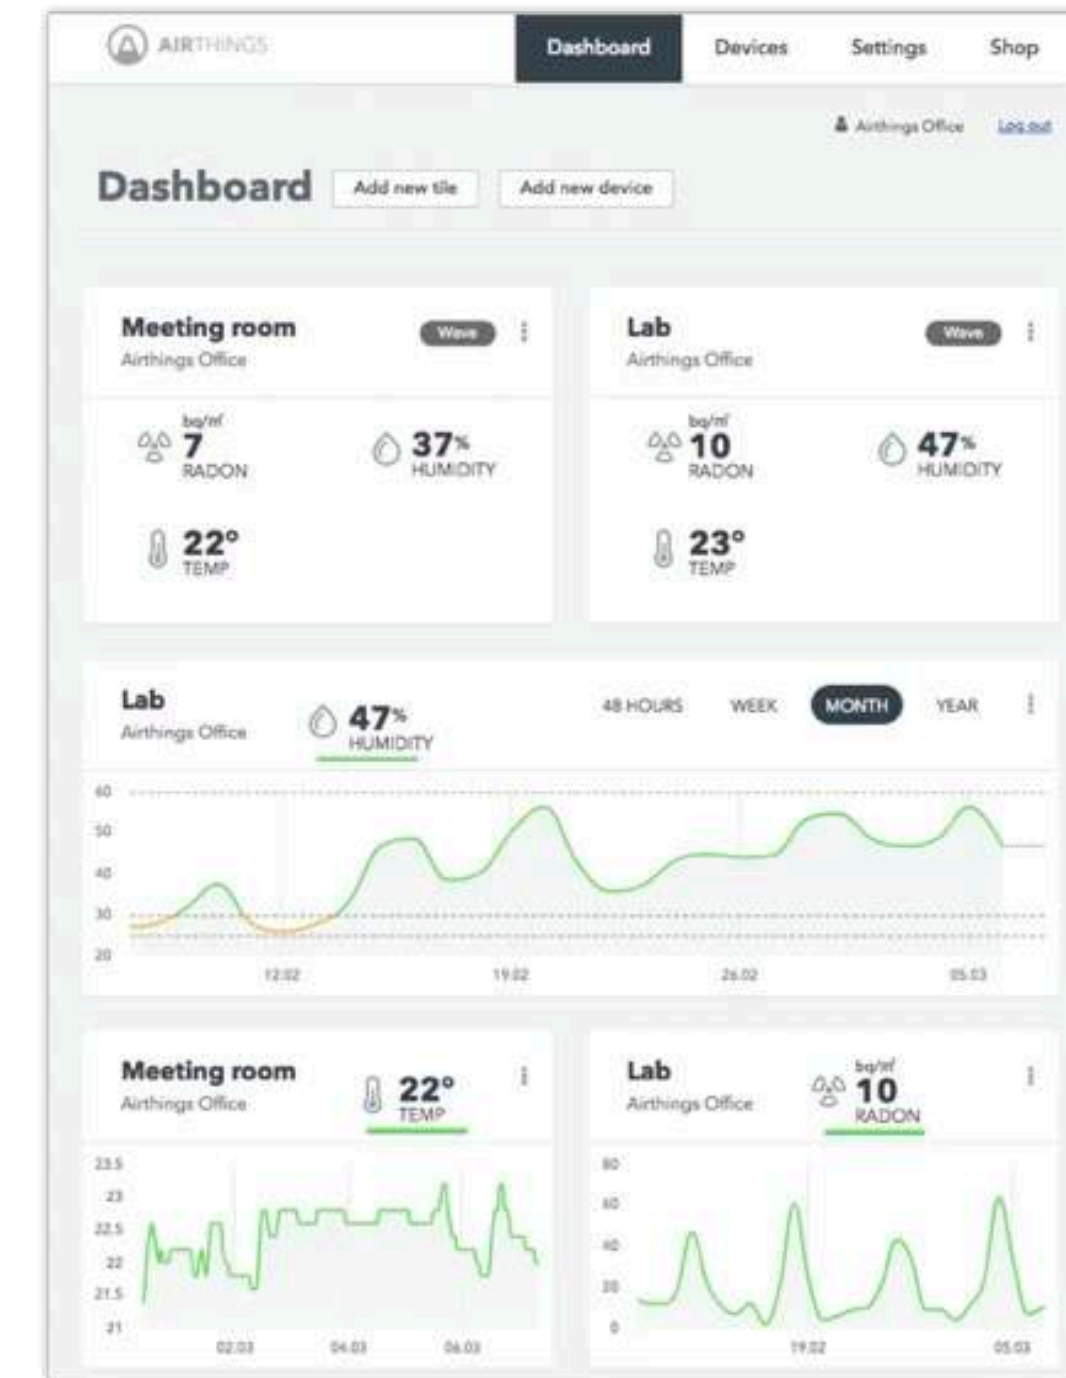

Air Purifier

1. Not clear what pollutants to monitor (and how to select air monitors)
2. Doesn't give insights into what the health risks are
3. Doesn't support makers in taking care of their health through suggested actions.

What's the matter?

Existing air quality monitoring solutions are not tailored for maker spaces.

- Health risk information of **different** types of pollutants aren't tailored for makers.
- Current monitors don't target makers and require hours of research to find what fits them best, in terms of price, performance and pollutant type.
- **Dash boards** are complex, and time consuming especially if they are not from a technical background.

- **Specific sensors are built in and can't be changed.**
- **Presented with the sensor at the centre**

Our Solution

Air Quality Monitoring for creative spaces...

- **Guide** creatives from step 1.
- **Easy** to select relevant monitor. With **quality** and **affordability**.
- **Simple** to understand what the data means and what can be done.

Ambient Works

Hardware and Software

- **Guide** : creatives from step 1.
- **Analyse** : app and sensor put numbers to make it tangible.
- **Act** :if air pollution can be improved, Ambient Works will help you breathe better.

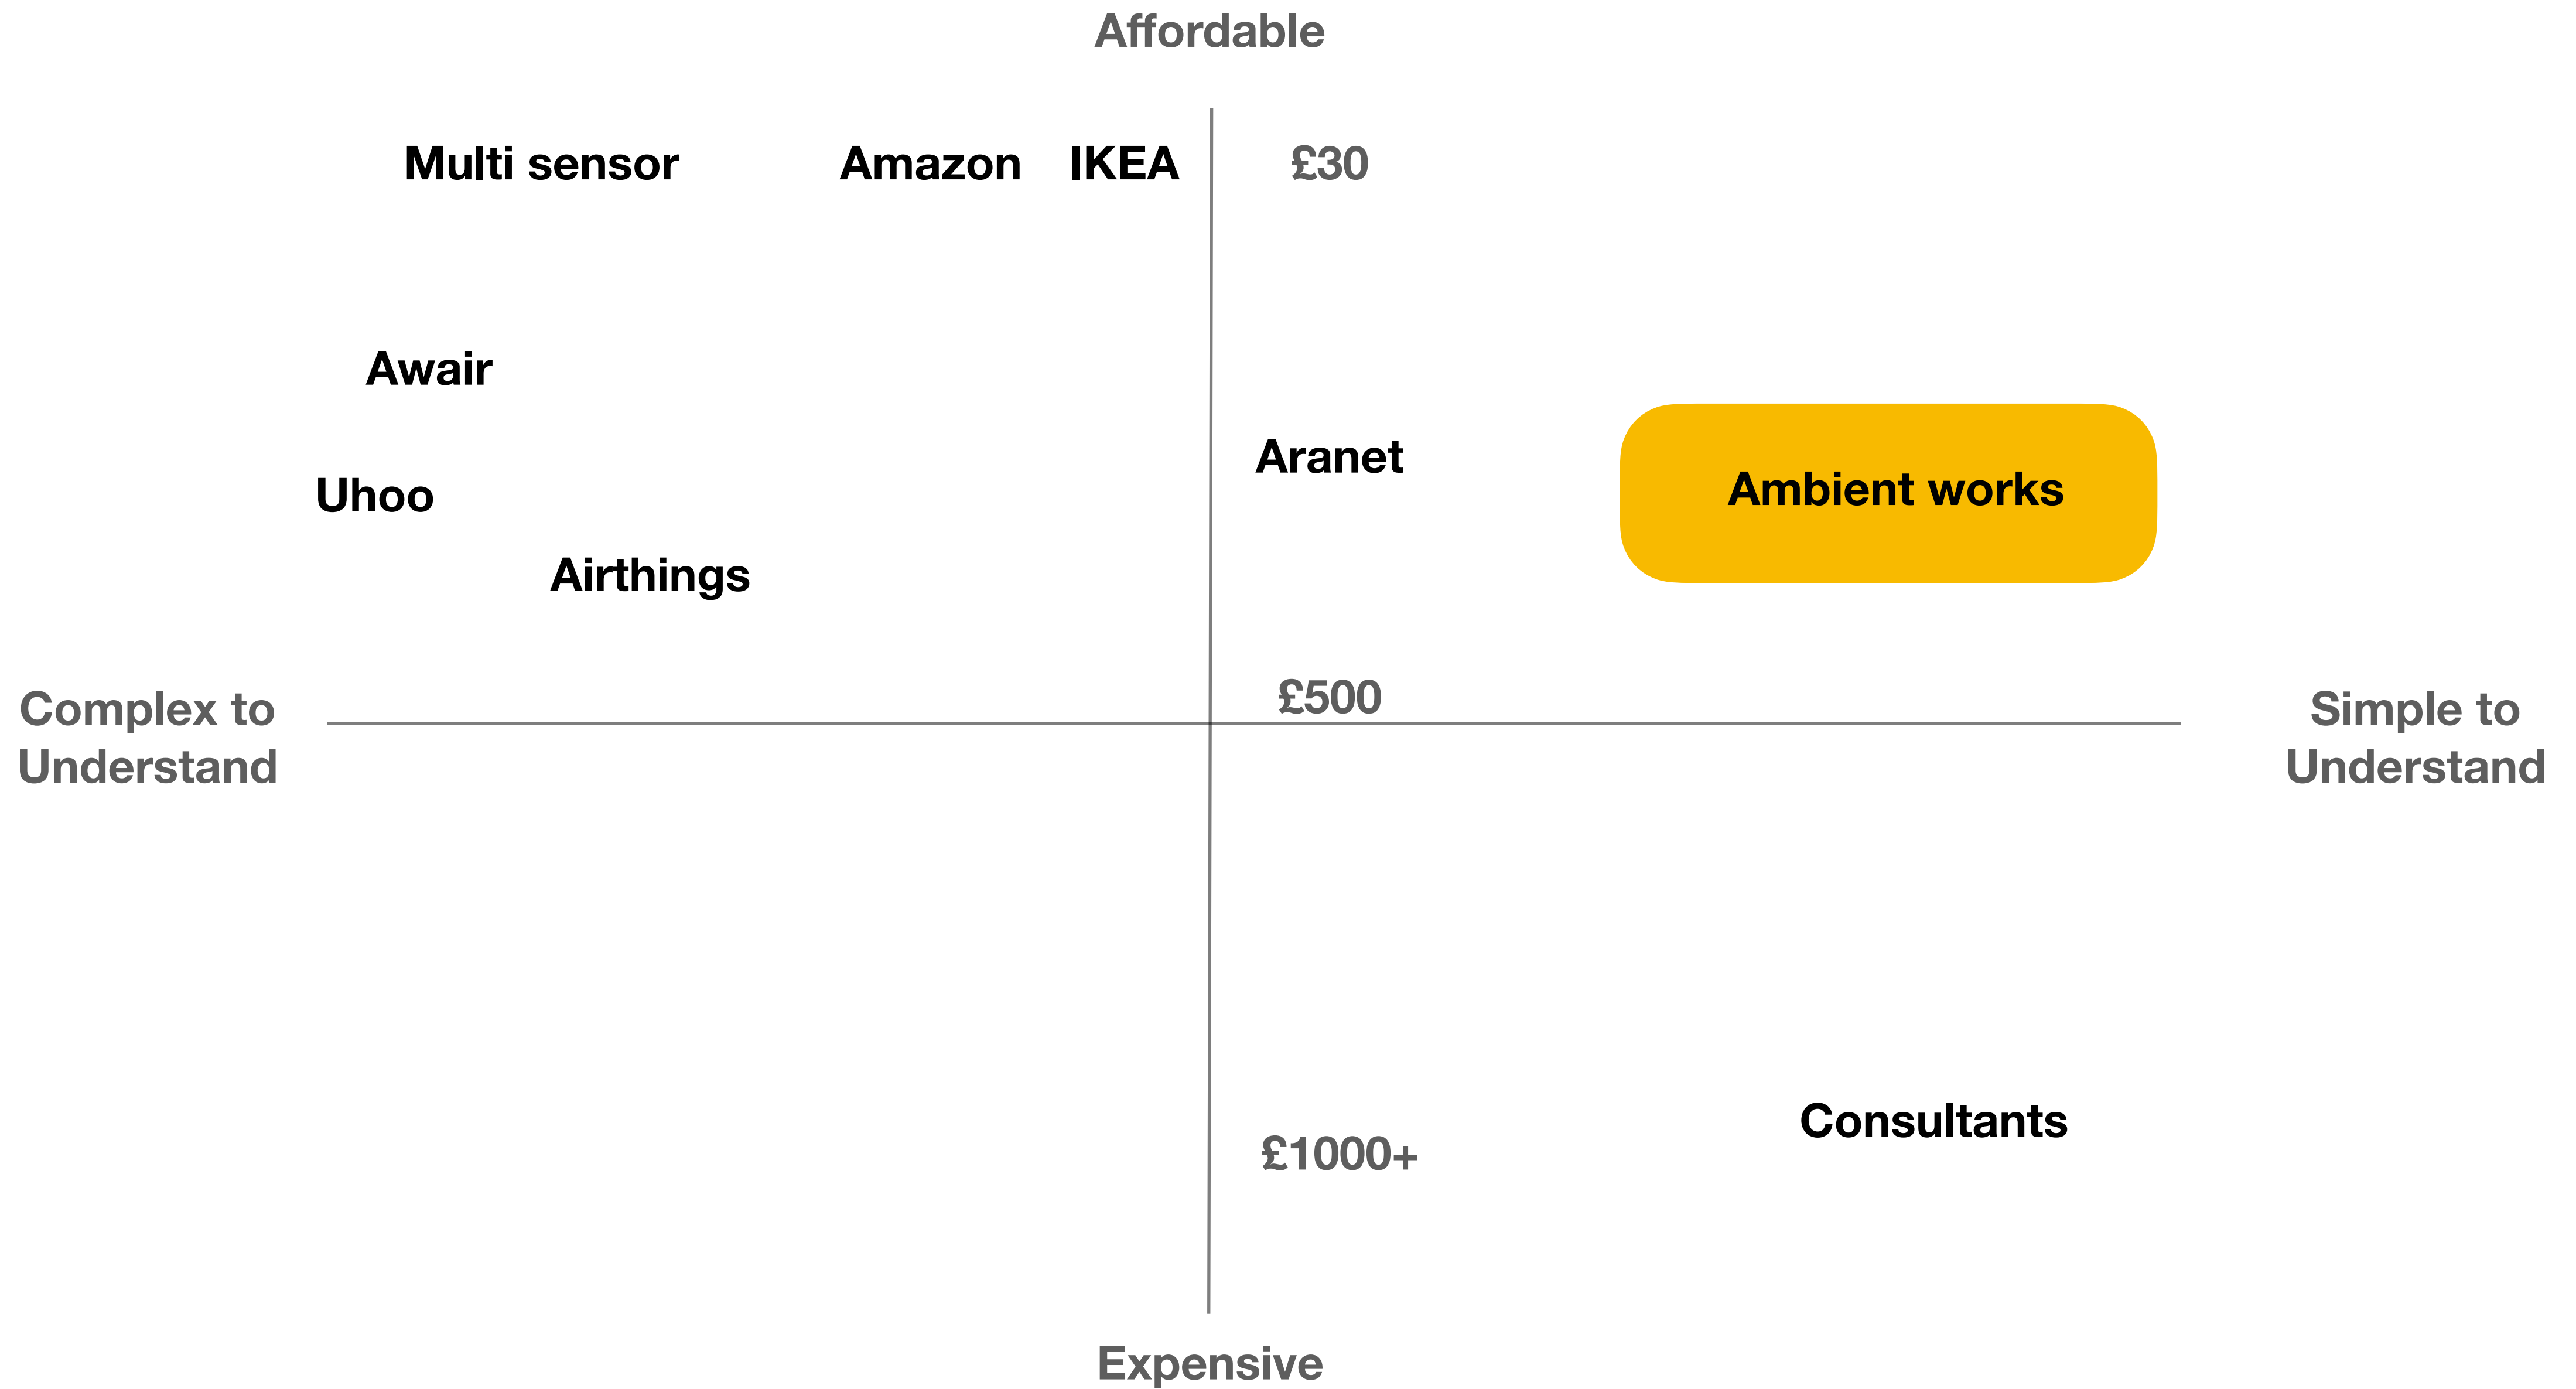

Hardware.

Designed for adaptability to different creative spaces.

- **Screen** with engaging info.
 - Expandable sensor for specific type of work
 - Long life battery mode.
(X months)
- easy set-up.

- **Expandable: smart plug...**
